

Runtime randomization and perturbation for virtual machines.

JAVIER CABRERA ARTEAGA

Licentiate Thesis in [Research Subject - as it is in your ISP]
School of Information and Communication Technology
KTH Royal Institute of Technology
Stockholm, Sweden [2022]

TRITA-ICT XXXX:XX
ISBN XXX-XX-XXXX-XXX-X

KTH School of Information and
Communication Technology
SE-164 40 Kista
SWEDEN

Akademisk avhandling som med tillstånd av Kungl Tekniska högskolan framlägges
till offentlig granskning för avläggande av licentiatexamen i [ämne/subject]
[veckodag/weekday] den [dag/day] [månad/month] [år/2022] klockan [tid/time] i
[sal/hall], Electrum, Kungl Tekniska högskolan, Kistagången 16, Kista.

Place, Date

Contents

Contents	vi
1 Introduction	1
1.1 Motivation	1
1.1.1 Why variants ?	1
1.1.2 Research questions	1
1.2 Contributions	1
2 Background & State of the art	3
2.1 WebAssembly overview	3
2.2 Software Diversification	8
3 Methodology	17
3.1 RQ1. To what extent can we artificially generate program variants for WebAssembly?	19
3.2 RQ2. To what extent are the generated variants dynamically different?	22
3.3 RQ3. To what extent do the artificial variants exhibit different execution times on Edge-Cloud platforms?	24
4 Results	27
4.1 RQ1. To what extent can we artificially generate program variants for WebAssembly?	27
4.2 RQ2. To what extent are the generated variants dynamically different?	30
4.3 RQ3. To what extent do the artificial variants exhibit different execution times on Edge-Cloud platforms?	33
5 Conclusions	37
Bibliography	39
